A little hiatus from my normal review style- but I needed to rant about this software in full detail.

This software was working GREAT. I could export as MP3s, I could make cool beats, and I got everything I expected from the software. Until something happened. An error message popped up saying that the beat maker "didn't work anymore". I clicked on continue anyway and, well, it was working right! It just stopped working! I haven't been able to get the software back, and at this point I don't expect to. Rating this 2/10, and I highly suggest you buy it when MAGIX fixes it.
